PROFESSIONAL SUMMARY

NetSuite Technical Consultant with nearly 3 years of hands-on experience at Zenardy delivering third-party integrations, large-scale data migration and custom SuiteScript 2.x solutions across ERP, retail, POS, accounts payable, banking and legal-tech platforms. Skilled in designing bi-directional data flows using RESTlets, webhooks, REST APIs and Azure middleware, and in translating complex business requirements into scalable NetSuite customizations. Served as technical architect on multiple multi-system implementations, with a strong focus on script optimization, governance management, robust error handling and high-volume data processing. Executed the migration of 12 years of historical data into NetSuite.

CORE COMPETENCIES

- SuiteScript 2.1 Development
- Third-Party & API Integrations (SuiteTalk)
- Integration Architecture & Design
- Custom Solution Design & Automation
- Data Migration & Validation
- Requirement Analysis & Solution Design
- Script Optimization & Governance Management
- Error Handling & Exception Management
- Large-Volume Data Processing
- SuiteBuilder Customization
- SuiteFlow Workflow Automation
- SuiteAnalytics & Reporting
- Production Support & Root-Cause Analysis
- Client & Stakeholder Coordination
- Technical Documentation
- Business Process Automation

TECHNICAL SKILLS

SuiteCloud Platform	SuiteScript 2.0 / 2.1, SuiteFlow, SuiteBuilder, SuiteAnalytics, SuiteTalk (REST Web Services), SuiteQL, Saved Searches
Script Types	Client, User Event, Scheduled, Map/Reduce, Suitelet, RESTlet
NetSuite Modules	N/record, N/search, N/https, N/runtime, N/task, N/email, N/format, N/url, N/error
Integration	REST APIs, Webhooks, SFTP, JSON, XML, HTTP/HTTPS, Azure Middleware, OAuth 2.0 & API Authentication
Integrated Platforms	Salesforce, Filevine, Tipalti, ERPLY, Shopify, ShopperTrak, Nibbio, ESL, Google Geolocation API, Bank Positive Pay (SFTP)
Customization	Custom Records, Fields, Forms, Workflows, Advanced PDF/HTML Templates
Programming & Tools	JavaScript, Java, SQL / MySQL, HTML, CSS, Postman, Git

PROFESSIONAL EXPERIENCE

NetSuite Technical Consultant — Zenardy — 2023 – Present

NetSuite Development & Customization

- Developed custom solutions using SuiteScript 2.x to automate business processes and implement complex business rules.
- Built Client, User Event, Scheduled, Map/Reduce Scripts, Suitelets and RESTlets, including beforeLoad, beforeSubmit and afterSubmit logic for validation, automation, field population and downstream processing.
- Built custom Suitelets with dynamic interfaces, filters, progress indicators and controlled transaction processing, and RESTlets to expose NetSuite functionality to external systems.
- Used Map/Reduce and Scheduled Scripts for background processing, scheduled integrations and high-volume data operations.
- Built SuiteBuilder customizations, SuiteAnalytics saved searches, SuiteQL queries, SuiteFlow workflows and Advanced PDF/HTML templates; managed script deployments.

Integration Architecture & API Development

- Designed and implemented REST API and webhook-based integrations, retrieving complete related object information before transaction processing.
- Implemented create-vs-update decision logic to prevent duplicates, plus field mapping and data transformation between NetSuite and external platforms.
- Worked with JSON/XML payloads, HTTP/HTTPS requests, OAuth 2.0 and API authentication, and request/response handling; tested APIs with Postman.
- Implemented integration logging, exception handling and troubleshooting mechanisms designed around NetSuite governance and script execution limits.
- Served as technical architect on multiple multi-system integration projects, defining solution architecture, integration patterns, data flows and field mappings.

Data Migration

- Executed the migration of **12 years of historical data** into NetSuite, ensuring accurate mapping, transformation, validation and data integrity.
- Analyzed legacy source-system data and built migration strategies aligned to NetSuite's data structure, followed by post-migration validation and reconciliation.

Testing, Debugging & Production Support

- Performed unit, integration, regression and end-to-end testing of customizations and integrations in sandbox and production.
- Troubleshot SuiteScript, API, webhook, data-synchronization and transaction-processing issues, performing root-cause analysis to resolve production incidents.
- Collaborated with functional consultants, project managers and clients on requirements; prepared technical documentation, test results and deployment notes.

KEY INTEGRATIONS

- **Filevine – Legal Practice Management:** Built a Filevine-to-NetSuite integration through Azure middleware using webhook-based processing; mapped external data to NetSuite records, matched on Project ID and Project Number, and applied create-vs-update and duplicate-detection logic.
- **Salesforce:** Retrieved property records to create corresponding Classes in NetSuite, with dynamic monthly status fields to track property status changes.
- **Tipalti – Accounts Payable:** Automatically imported vendor bills and purchase orders, including data mapping, validation and transaction processing.
- **ERPLY – ERP/POS:** Built a bi-directional integration synchronizing transactions, inventory, entities and time entries.
- **Shopify:** Integrated NetSuite with Shopify for customer and business data synchronization, covering API communication, data mapping and troubleshooting.
- **Nibbio – Retail Platform:** Automatically created Sales Orders in NetSuite from customer purchase orders received from Nibbio.
- **ESL – Electronic Shelf Labels:** Synchronized item details and location-based on-hand quantities to shelf labels across stores; resolved certificate issues to restore sync.
- **ShopperTrak:** Imported daily store entry and exit foot-traffic counts through an end-of-day scheduled integration.
- **Google Geolocation API:** Retrieved latitude and longitude from custom address inputs for location-based processing.

CUSTOM SOLUTIONS

- **Positive Pay File Automation:** Scheduled script that generates Positive Pay files without manual Suitelet runs, using configurable parameters (including voided checks) and SFTP transfer to the bank.
- **Catch Weight Solution:** Managed variable-weight items across order, inventory and fulfillment processes.
- **Automatic Location Assignment:** Automated location assignment and allocation on Sales Orders based on business rules.
- **Landed Cost Customization:** Captured, calculated and distributed additional costs across transaction lines.
- **Secondary Book & Expense Allocation:** Distributed accounting entries across secondary books and expenses across accounting segments by defined rules.
- **SKU Substitution:** Configurable logic to automatically replace items based on predefined business rules.
- **Cash Z Flow:** Automated end-of-day deposit creation for payments and cash sales, grouped by payment method and currency.
- **Consignment Flow:** Month-end consignment reporting that creates invoices and bills and calculates revenue splits by defined percentages.
- **Tax Automation:** Processed CSV files from a File Cabinet folder to create tax records, archiving processed files.

CERTIFICATIONS

- NetSuite SuiteFoundation Specialist — NetSuite, May 2026
- NetSuite Certified Financial Associate — NetSuite, Oct 2025
- NetSuite Certified BI & Reporting Associate — NetSuite, Oct 2025
- NetSuite Certified AI Foundations Associate — NetSuite, Oct 2025
- Oracle Analytics Cloud 2025 Certified Professional — Oracle, Oct 2025 – Oct 2027
- Oracle Cloud Infrastructure 2025 Certified AI Foundations Associate — Oracle, Oct 2025 – Oct 2027
